

SUMMARY

Engineer with 3+ years delivering production platforms for enterprise financial-infrastructure customers, working directly with client engineering teams from requirements through live debugging inside their environments. Deep AWS/Kubernetes/IaC foundation, now building LLM and agent systems end-to-end (LangChain, RAG, Bedrock AgentCore, React). Measurable outcomes: \$180K annual cloud savings, 80% compute reduction, zero-downtime delivery across 28 EKS clusters.

TECHNICAL SKILLS

- **Languages & AI Engineering:** Python, Bash, Groovy, SQL; LangChain, LlamaIndex, LangSmith, FastAPI, RAG & vector search (ChromaDB, HuggingFace, PineCone), AWS Bedrock AgentCore, Gemini, Pydantic
- **Cloud & Platform:** AWS, GCP, Kubernetes, Docker, Helm, ArgoCD, Flux, Atlantis, Jenkins, Karpenter, KEDA, Prometheus, Grafana, OpenSearch, Terraform, Terragrunt, OpenTofu, Ansible, Git
- **Security, Governance & Compliance:** Kyverno, OPA, Checkov, Trivy, AWS Security Hub, GuardDuty, Inspector, AWS KMS (BYOK), External Secrets Operator, Keycloak/OIDC, Istio mTLS, CIS Benchmarks, SOC 2, PCI-DSS
- **Data, Messaging & Integration:** PostgreSQL, Redis, Kafka / Amazon MSK, ActiveMQ, RabbitMQ, GCP Pub/Sub, Protobuf
- **Certifications:** AWS Solutions Architect, Terraform Associate 003, Kubernetes CKAD

EXPERIENCE

- **Baton Systems** Remote / Chennai, India
Feb 2023 – Present
 - *Senior DevSecOps Engineer* — promoted through 3 levels from Intern
 - Primary engineering contact for a global financial market infrastructure client: join technical calls, translate settlement and trade-flow requirements into platform designs, and debug live issues inside the partner's AWS environment with their engineers.
 - Delivered cross-cloud integrations for client trade-flow systems — EKS-to-MSK over IAM/IRSA, EKS-to-GCP Pub/Sub via Workload Identity Federation, Protobuf schemas for FX trade payloads — unblocking data exchange across systems the customer did not control.
 - Designed multi-region DR for FX settlement messaging (Oregon–London–Ireland) outside vendor-supported replication regions; implemented a network-of-brokers topology and validated Active/Passive failover to a 10-minute recovery objective.
 - Re-architecting Terraform modules and GitOps workflows (Atlantis, ArgoCD) into reusable multi-customer deployments; automation cut customer environment delivery from 4 days to a 2-hour single-click deployment.
 - Reduced annual AWS spend by \$180,000 through Graviton migration and right-sizing; designed Karpenter/VPA/KEDA autoscaling that cut compute costs 80% while holding performance through traffic spikes.
 - Executed zero-downtime Kubernetes upgrades across 28 production EKS clusters and 300+ nodes, coordinating version transitions, add-on compatibility and workload validation with zero customer impact.
 - Met enterprise client security and audit requirements via Policy-as-Code guardrails, BYOK encryption with automated key rotation, and CIS-compliant hardening; built observability that cut incident response time 30%+.

PROJECTS

- **SetuHaul — Autonomous Freight Operations Platform** [Live Demo](#) | [GitHub](#) — Built an end-to-end dock coordination system: a LangChain agent on AWS Bedrock AgentCore handling dispatcher conversations, plus a React driver portal for exception logging and ETA tracking. Eliminated double-booking races using atomic PostgreSQL transactions on Supabase with Redis session state on Upstash.
- **Lead Intelligence System** Automated inbound lead scoring and outreach drafting in Python, LangChain and Gemini with LangSmith tracing, using a hybrid deterministic-semantic rubric and a 2×2 Fit-Intent routing engine. Batching and rate-limit recovery cut LLM API calls 88% and removed manual triage.
- **RAG Pipeline** Document QA pipeline in LangChain with PDF ingestion, tuned chunking and ChromaDB/HuggingFace embeddings, plus an LLM re-ranking stage that improved retrieval relevance over baseline top-k search.

EDUCATION

SRM Institute of Science and Technology
B.Tech, Computer Science Engineering; CGPA: 9.14

*Tamil Nadu, India
May 2019 – May 2023*
